Preface	iii
Contents	v

PART A: OVERVIEW

Chapter 1 Dreams, doubts and dread	3
1.1 Dreams of AI	4
1.2 Doubts about AI	5
1.3 Dread of AI	6
1.4 How to approach AI	8
<i>R1: Refer to Modern-AI</i>	8
<i>R2: AI is more than just LLMs</i>	8
<i>R3: Systematic studies, not anecdotes</i>	9
<i>R4: Do not be misled by youthful deficiencies</i>	9
<i>R5: Base negative assessments on the state of the art</i>	9
1.X Exercises for chapter <u>1</u>	10
Chapter 2 Unscrambling two full examples	11
2.1 An invitation one cannot refuse?	11
<i>Overall structure</i>	14
<i>Stage 1: contextual assembly</i>	14
<i>Stage 2: Tokenization</i>	15
<i>Stage 3: Embedding</i>	17
<i>Stage 4: Intent classification</i>	20
<i>Stage 5: Self-attention</i>	21
<i>Stage 6: Generation of first token</i>	22
<i>Stage 7: Autoregressive loop</i>	23
<i>The LLM hallucinates!</i>	24
<i>Drawing lessons</i>	25
2.2 Translating famous verses	25
<i>Can she actually turn pale and red at the same time?</i>	25
<i>LLM translations</i>	26
<i>Why translation is hard</i>	27
<i>Different languages, different tricks</i>	28
<i>Different languages, different rules</i>	29
<i>The challenge of translation</i>	30
<i>So what?</i>	31
<i>The translation process</i>	31
2.3 The overall flow	34
2.4 Lessons from the examples	35
2.5 Appendix: the moving frontier of AI abilities	36
2.X Exercises for chapter <u>2</u>	38

Chapter 3 The triumph of empiricism	39
3.1 The bitter lesson	39
3.2 The impact of empiricism	40
3.3 An example	41
3.4 Induction and deduction	42
3.X Exercises for chapter 3	43
Chapter 4 The principles of Modern-AI	45
4.1 AI is problem-solving	45
4.2 The basic AI scheme	46
4.3 The nature of models	47
4.4 Relying on probabilities	49
4.5 Looking for parameters	50
4.6 Prediction, feedback and optimization	51
4.7 Never nonlinear (what, never? Hardly ever!)	53
4.8 The magic of size	54
4.9 Spilling the beans	56
4.X Exercises for chapter 4	57
Chapter 5 The path to Modern-AI: a brief history	59
5.1 The two trends	59
5.2 What the history covers	60
5.3 The theoretical debate: early musings on AI	61
<i>The Turing test</i>	61
<i>The Chinese-Room argument</i>	62
<i>ELIZA: a provocation turned sour</i>	63
5.4 First neural steps: the perceptron	65
<i>Birth of the Perceptron</i>	65
<i>What is a Perceptron?</i>	65
<i>The limits and demise of the Perceptron</i>	66
5.5 Logic-based (“symbolic”) approaches: Old-AI	67
<i>The Dartmouth workshop</i>	67
<i>The first blossoming</i>	68
<i>Logic and rules</i>	69
<i>Practical outputs of Old-AI</i>	71
5.6 AI Winter	72
5.7 The diligent comeback: Modern-AI	74
<i>Attention-grabbing achievements</i>	74
<i>Automatic translation</i>	75
<i>Learn and compute</i>	76
5.8 The flies and the bees: a metaphor	77
5.9 Appendix: a perceptron cannot compute “xor”	78
5.X Exercises for chapter 5	78
Chapter 6 ... But is it intelligence?	79
6.1 Assessing the “I” in “AI”	79
6.2 Does AI “understand”?	79
6.3 Falsifiability	80
6.4 Two concepts of intelligence	81
6.5 Ascertaining intelligence	81

PART B: TECHNOLOGY

Chapter 7 Using a neural network	85
7.1 Using a neural network	85
7.2 Overfitting	87
7.3 Underfitting	89
7.4 How do we build the network?	90
Chapter 8 The math you need	91
8.1 The scalar product	92
<i>A shopping trip</i>	92
<i>Shapes</i>	93
<i>The scalar product as a combinator</i>	94
<i>The scalar product as similarity measurement</i>	95
8.2 Linear transformation and matrices	98
<i>From vectors to matrices</i>	98
<i>Multiplying a matrix and a vector</i>	99
<i>Linear transformations</i>	100
<i>Why all this matters</i>	101
<i>Matrix multiplication</i>	101
<i>Composing transformations</i>	103
<i>Linear is not enough!</i>	103
<i>Linear? Affine? Who cares!</i>	104
8.3 Minimization	105
<i>The need for minimization</i>	105
<i>Watch your weight and live longer</i>	105
<i>Against what do we minimize?</i>	109
<i>Closed form</i>	111
8.4 Derivatives and gradients	112
<i>Secants and tangents</i>	113
<i>The derivative</i>	114
<i>Differential calculus</i>	116
<i>The Chain Rule</i>	117
<i>Partial derivatives and gradients</i>	118
8.5 Integrals	120
8.X Exercises for chapter 8	122
Chapter 9 What a neural network computes	123
9.1 Overall structure	123
9.2 Neuron: the linear part	124
<i>Overall picture</i>	124
<i>Getting the dimensions right</i>	125
<i>From scalars to vectors and matrices</i>	126
<i>An idea of the sizes involved</i>	128
9.3 Going nonlinear	129
<i>Linear with linear is linear</i>	129
<i>The Perceptron does not cut it</i>	130
9.4 Cutting off: ReLU	130
9.5 From raw numbers to probabilities: softmax	132
9.6 Sigmoid	135
9.7 Hyperbolic tangent	137
9.8 Choosing an activation function	137
9.9 The power of neural networks	138
Chapter 10 Training a neural network	139
10.1 The setup	140

10.2 The loss function	140
<i>Loss functions for regression</i>	141
<i>Loss functions for classification</i>	142
10.3 Gradient descent	143
10.4 The overall learning procedure	145
10.5 Obtaining a training set	146
10.X Exercises for chapter 4	149
Chapter 11 From embeddings to transformers	151
11.1 Game, set, match	151
11.2 What makes text special	152
11.3 Embedding	153
<i>Syntax-based approaches</i>	153
<i>Tokens</i>	154
<i>Byte-Pair Encoding</i>	155
<i>From encoding to embedding</i>	156
<i>Measuring closeness</i>	158
11.4 Convolution networks	160
11.5 RNNs and LSTM	162
<i>Recurrent Neural Networks</i>	162
<i>Long Short-Term Memory networks</i>	164
11.6 Attention and transformers	165
<i>Representations</i>	166
<i>The idea of attention</i>	166
<i>Using self-attention</i>	168
<i>Computing attention</i>	169
<i>Obtaining the matrices</i>	170
<i>Multiple heads</i>	170
11.X Exercises for chapter 11	171

PART C: USING AI

Chapter 12 Using AI effectively	175
12.1 How not to use AI	175
12.2 The fundamental limitation	175
12.3 Should we keep a human at the helm?	176
12.4 Avoid the wrong tasks	177
<i>Tasks requiring exactness</i>	178
<i>Tasks requiring accountability</i>	179
<i>Tasks with high ethical stakes</i>	179
<i>Tasks lacking a clear way to evaluate the quality of outputs</i>	180
<i>Tasks requiring genuine novelty</i>	180
<i>Tasks requiring up-to-date information (without retrieval tools)</i>	181
<i>Tasks requiring precise numerical computation or logical deduction</i>	181
12.5 Select the right tasks	183
<i>Text manipulation (Natural-Language Processing)</i>	183
<i>Pattern recognition and automatic control</i>	184
<i>Idea generation</i>	185
<i>Software development</i>	186
12.6 Prompt engineering	186
12.7 AI agents	188
12.8 Trust (or not) but verify	188
Chapter 13 Risks of using AI	189
13.1 Hallucinations	189
13.2 Model collapse and data poisoning	190

13.3 Generalized pollution: the ai slop invasion	191
13.4 Lack of understanding	192
13.5 Intellectual property looting	193
13.6 Elegant form legitimizing bad substance	194
13.7 Prompt injection	195
13.8 Energy and climate impact of AI	197
13.9 AGI and the overtaking of humanity	199
13.X Exercises for chapter 13	200
Chapter 14 Socrates reborn: learning with AI	203
14.1 Methodological caveat	203
14.2 The learning quintet	204
<i>L2: Books</i>	205
<i>L3: Articles and Web resources</i>	206
<i>L4: Educational videos</i>	207
14.3 L5: Using the LLM, Socratically	208
<i>More sophisticated search</i>	208
<i>Beyond search: Socratic interaction</i>	209
<i>Your personalized, custom-made tutorials</i>	209
<i>In your own terms</i>	210
<i>Generating examples</i>	211
<i>The practical power of counterexamples</i>	211
<i>Give me an exercise</i>	212
14.4 L1: You are in control	212
<i>Limitations and caveats: auxiliary tools</i>	212
<i>Limitations and caveats: LLM</i>	213
<i>Learning in the age of multiple attractions and short attention spans</i>	214
14.5 With a teacher	215
<i>The role of teachers</i>	216
<i>AI as a support for customized learning materials</i>	216
14.X Exercises for chapter 14	217
Chapter 15 Education in the AI era	219
15.1 A reasoned approach	219
15.2 Easy answers	220
15.3 Cheating	220
<i>AI offense, AI defense</i>	220
<i>Monitoring tools</i>	222
15.4 What happens to homework?	222
15.5 Using AI in teaching	224
15.6 Studying AI	226
15.X Exercises for chapter 15	227
Chapter 16 What happens to software development?	229
16.1 Automatic code generation	229
16.2 You will not need to program anymore!	230
16.3 Déjà vu	232
16.4 Prompt engineering is requirements engineering	232
16.5 Kinds of software development	233
16.6 The nature of AI help	234
16.7 The nature of software produced by AI	235
16.8 Accepting a certain percentage of errors	236
16.9 The rest of software engineering	238

16.10 AI for software engineering: the core challenge	240
<i>Bugs and their probability</i>	241
<i>From probable to provable</i>	242
<i>Formal methods</i>	242
<i>Towards a workable process</i>	242
Chapter 17 How to make AI work for you	245
17.1 Will entire professions disappear?	245
<i>Bad news</i>	246
<i>Case by case</i>	247
17.2 Adapting your career to the advent of AI	248

PART D: REFERENCE	
Glossary	253
Bibliography	259
Index	269
